OPEN ROLE · KEEMAKR AI

QA/QC Engineer (AI Systems)

Mumbai / Bangalore / Remote India **Rs.6-10 LPA (based on skills)** **1+ yrs experience**

SUMMARY

Test and ensure reliability of AI agents that run real business operations, focusing on edge cases, hallucinations, and failure modes unique to AI systems.

ABOUT THE ROLE

We need a QA engineer to test AI agents end to end. You check the conversation and the business app that the agent changes. You find out if the agent gives a correct, safe answer, and if the app data is correct after the chat. About half of the work is hands-on manual testing of live apps. The other half is building and running an automated framework that runs hundreds of realistic chats and checks each result. Responsibilities: - Turn test cases, PRDs and bug reports into test plans, and add the cases that the request did not name. - Explore staging and dev apps, and map screens, roles and APIs. - Write realistic chat scenarios. Each one starts with a real problem. - Be sceptical of the agent: check every answer against the app data. - Add each new check to the framework (utility, script, npm command, offline test). - Record every chat in CSV, with the full conversation. - Check Langfuse traces on every run. A step that is not logged is a bug. - File clear Linear tickets that name the environment and include proof. Remove duplicates first, then retest and close or reopen each ticket. - Respect shared environments, and keep LLM cost low.

WHAT YOU'LL NEED

- Both manual and automated testing
- JavaScript (ESM) and Playwright
- Experience testing LLM or chatbot products: hallucination, prompt injection, permission leaks
- LLM-as-judge rubric design
- API and database checks
- Clear bug writing and clear written English

NICE TO HAVE

- Promptfoo and Langfuse
- Odoo, ATS or CRM data models
- SMS and email channel testing
- Healthcare apps

- AI coding agents such as Claude Code

THE STACK

JavaScript · Playwright · Promptfoo · Claude and OpenAI judges · Langfuse · Linear · Slack · GitHub
