

Senior Engineer - Agentic Systems

Mumbai / Remote India 18-30 LPA + Significant Equity 6+ yrs experience

SUMMARY

Technical leader architecting core agent infrastructure for production AI systems that run entire business functions at scale.

ABOUT THE ROLE

Join an early-stage stealth startup building AI agents that run entire business functions in production - not demos or prototypes. You'll architect the core agent infrastructure from first principles, make critical technical decisions, and mentor the team while your systems power businesses across continents. This is a high-ownership role with significant equity upside, where you'll shape the technical foundation of autonomous AI systems designed for 99.9% uptime and real-world reliability at scale.

WHAT YOU'LL NEED

- 6+ years building production software, with 3+ years in senior or lead roles
- Designed and shipped complex distributed systems
- Deep experience with LLM systems in production
- Strong proficiency in Go and/or TypeScript for system architecture
- Track record of technical leadership and mentorship
- Comfortable with ambiguity and making high-stakes technical decisions

NICE TO HAVE

- Founded or been early at a startup
- Built agent or workflow systems from scratch
- Experience with ML infrastructure or MLOps
- Open-source contributions or technical writing

THE STACK

Go · TypeScript · Python · Claude API · OpenAI · PostgreSQL · Redis · Kafka · AWS · Kubernetes · Terraform
